

1.1 Work Breakdown Structure (WBS)

The following breakdown represents the major phases of development using the Incremental Model:

Figure 1: WBS

The Work Breakdown Structure (WBS) of the Skill Barter System displays the way in which the project is broken down into smaller bits and how it is built in stages. It begins with the core setup stage where planning activities such as requirement analysis, research, diagrams, and environment setup is done. It proceeds to authentication, where the database creation, user registration, login, email verification and profile setup are performed. The user and the administration module is developed thereafter with dashboard, user, skill and session monitoring. Then, the more complicated elements like session system, chat, sharing resources, feedback, and payment integration are developed, which are the primary functionalities of the platform. Lastly, testing of the project is undertaken, comprising of various forms of testing and reportages in order to ensure that the system is functioning well. The WBS, in general, demonstrates a clear and systematic manner of executing the project in stages.
