

Class Diagram:

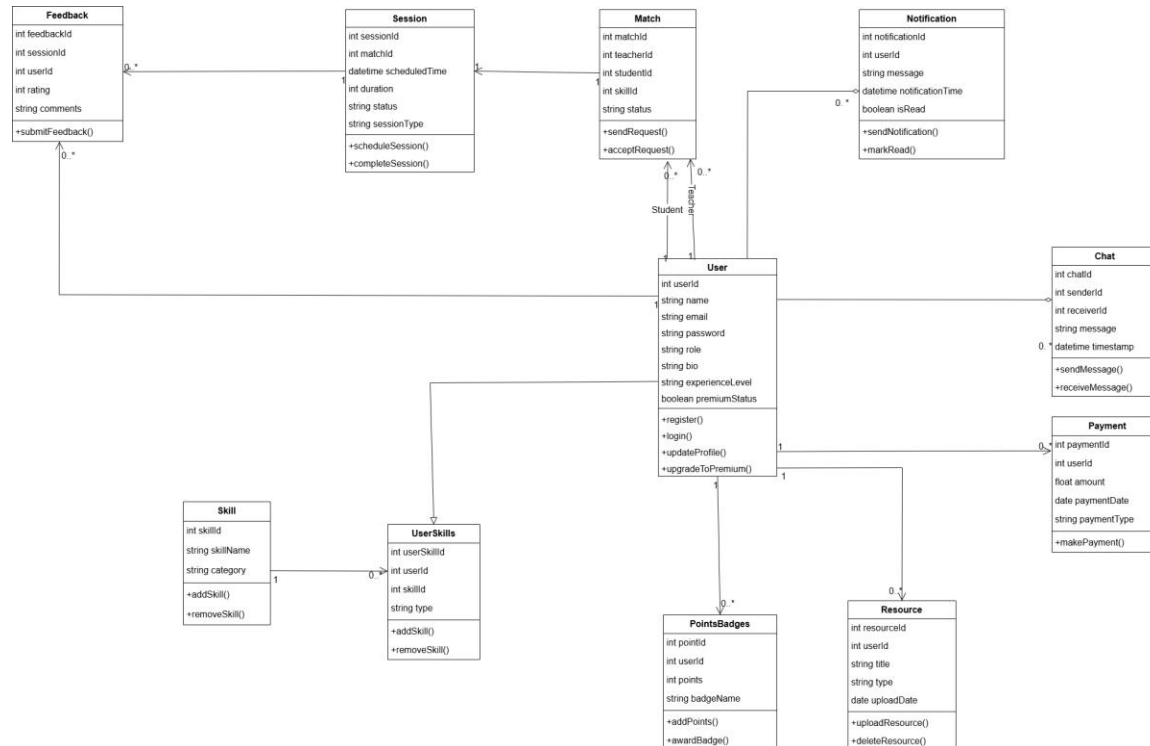

Figure 1: Class Diagram

The class diagram is an object-oriented design of the system that displays the arrangement of functionality into classes. The User class is the central one, but it handles authentication, profile, and premium upgrades. Skills are also handled using the Skill and User Skills classes, where the users are connected to pedagogical roles or to the role of learning. The classes are Match and Session that handle requests and scheduled learning activities and the Chat that facilitates messaging between the users. Resource process uploaded learning content, Payment is used to handle transactions, Notification sends system notification and Feedback receives session ratings. In general, the diagram shows that there is a distinct division of responsibilities, which contributes to scalability and maintainability.
